

## LEED Certification

Based on LEED 2009 v3 standard for New Construction and Major Renovations –

Ultra Aluminum fences and railings are constructed from aluminum extrusions with a recycled content of at least 80% by weight. Approximately 75% of the recycled content is industrial process scrap and the remaining 25% comes from post-consumer sources such as:

- Obsolete or post-consumer car and truck wheels
- Obsolete or post-consumer window, door or automotive extrusions
- Obsolete or post-consumer coil, plate and sheet

This meets the Materials and Resources (MR) Credit 4: Recycled content of 20% minimum (post-consumer + ½ pre-consumer) requirements.

This should allow any project using Ultra products to be eligible for 2 points in the MR Credit 4 – Recycled Content category.

If any further information is required, please contact us at (800)656-4420
